ESCOLIMBURG2020 PROJECT

ESCO IS GO

ESCOLIMBURG2020 is launched!

Can we make Limburg the most sustainable province of Belgium? Certainly, if the Province of Limburg, Infrac and Dubolimborg have any say in this matter. With the brand new ESCOLIMBURG2020 project – which enjoys the support of IEE or Intelligent Energy Europe – we help Limburg municipalities preserve their heritage.

NEW PROJECTS

ESCOLIMBURG2020

ESCOLIMBURG2020 proudly presents new projects: this year we helped local authorities in making their buildings more sustainable and future proof. Provincial schools in Voeren, Lommel and Diepenbeek were provided with a new roof, the city hall of Diepenbeek and sports centre De Bemvoort in Overpelt also contracted ESCOLIMBURG2020.

INNOVATIVE FINANCING

CONFERENCE

Innovative financing for energy efficiency and renewables: feedback from successful projects

On October 8 a conference will be held in Brussels concerning innovative financing for energy efficiency and renewables. Successful projects will give their feedback based on user data. Patrick Boucneau, sustainable development coordinator, Province of Limburg, and Dirk Schreurs, Head of RUE, Infrax – both involved in Escolimburg2020, will speak about the project.

Up-scaling investments in energy efficiency and renewables is a major challenge to meet the European Union's energy targets for 2020. Lack of public resources requires new approaches to investment. Local and regional authorities have a key role to play in mobilising stakeholders, developing a project pipeline and creating the business case for attracting private investment.

This shift to innovative financing approaches is supported by the European Union's Intelligent Energy Europe and Horizon 2020 programmes.

This conference will focus on the detailed presentation of 8 successful projects across Europe, which are developing new ways to set up and finance investments in public buildings, street lighting and housing.

Local and regional authorities will have the opportunity to learn how to concretely implement similar approaches in their own territories.

Place to be: HUSA President Park Hotel, Boulevard du Roi Albert II 44, 1000 Bruxelles.

PROLONGATION UNTIL MARCH 2017

ESCOLIMBURG2020

Since april 2013 ESCOLIMBURG2020 is succesfully helping to reduce emissions by municipal buildings with smart investments and actions. In three years time, many municipal projects were being futureproofed for a total worth of some 22 million euros in investments. Money that benefitted the Limburg construction sector and all of its workers. Due to the great success, the project was extended by the province of Limburg and Europe for one year until **march 2017**.

20 MILLION OF INVESTMENT

ESCOLIMBURG2020

Through the successful combination of custom-made CO₂-emissions reduction plans, individual policy dialogues and targeted training, almost all the Limburg municipalities have taken their first important steps in the development of an overall vision of the renovation of their building patrimony. The existing ESCO operation of public grid operator Infrax has been finetuned and streamlined. **46 projects** – 35 completed and 11 in progress – are being realised within the framework of ESCOLIMBURG2020, which equals **20,564,249 euros of investment**. Because of this, we are saving at least **20,522 MWh of primary energy** per annum, **CO₂-emissions** are being reduced by **5,026 tonnes** and – due to the reform of the support mechanism of green certificates, we are producing a limited amount of **147 MWh of renewable energy**.
